EXPERIENCE

OpenAI

Member of the Technical Staff — San Francisco, CA · 2023 - Present

- Early member of the Codex team, building cloud runtimes as the project evolved from internal retrieval and question answering into a cloud agent that produces mergeable pull requests
- Experimented with incremental indexing for retrieval over codebases and built fast-starting container images for development against a large codebase.
- On the Codex research team, restored multimodal capabilities to the post-training stack, enabling models to use visual feedback when evaluating frontend work and accept images and diagrams as input
- Built the V8-based Code Mode runtime, enabling models to discover and compose tools while keeping unnecessary tool output out of their context. The approach improved token efficiency and made more agentic capabilities accessible to models with smaller context windows
- Evaluated and hardened Code Mode's security, moving the runtime from an embedded tool into an isolated, locked-down process
- Led an engineering project to improve GPU reservation and allocation across teams, increasing utilization and enabling faster deployment of new models
- Supported, operated and participated in on-call for our global GPU fleet serving large language models

Mux

Staff Software Engineer — San Francisco, CA · 2021 – 2023

- Worked on the cost, availability, and latency of video delivery infrastructure.
- Operated realtime data (clickhouse + kafka) infrastructure for usage tracking and billing.
- Implemented a custom Stream Security feature to restrict content access by property.
- Helped improve development tooling and processes as a member of the Developer Velocity working group.

Netflix

Senior Software Engineer — Los Gatos, CA · 2019 – 2021

- Built a first-party functions as a service platform for rapidly deploying and scaling application code
- Member of cross-org team building out multi-container workload deployments on Netflix's container orchestrator, Titus
- Partnered with the Machine Learning team to provide the hosting for trained models

Twitch

Senior Software Engineer

San Francisco, CA · 2014 – 2019

- Prototyped an OpenConnect-like caching layer for live video replication
- Architected and Deployed infrastructure for social content sharing platform for 15MM+ DAU
- Migrated the web application stack to GraphQL as part of a team focused on time to first frame
- Participated in an architecture working group supporting contributions from a growing engineering team

Interana

Engineer

Palo Alto, CA · 2014

- Introduced a modern build process and React to our data visualization and query web application
- Rearchitected web server for query submission with a focus on improving single host throughput
- Built a flow control wrapper to enable evented async handling of long query operations

Rockmelt Inc

Software Engineer

Mountain View, CA · 2010 – 2013

- Led development of the Rockmelt web application as the team grew from one to five engineers.
- Built a declarative JavaScript application framework to support rapid iteration.
- Integrated Facebook features into the native UI of a Chromium-derived browser.

EDUCATION

Northeastern University

Bachelor of Science in Computer Science and Information Science

Boston, MA · 2010

- Named One of Top 100 Influential Seniors
- Received one of sixteen 2010 Outstanding Co-op Awards
- First Place in 2010 National Collegiate Cyber Defense Competition
